- Primary Palette Suggestion: Purple (#2e266d, #6257e3, #f4f6fc) This gives a sleek, professional edge. Competitors lean neutral, so your violet accents stand out.
- Secondary Palette: Green (#eef8eb, #81b673, #2c4f40) Reserve for highlights, like success messages!

Design style reference: <https://dribbble.com/shots/24999109-Pixelia-Talent-Marketplace-Website>

when i start typing on this, the placeholder text should go away. Right now my cursor goes to the right of it. Also, make this a bigger box that aligns with the text on the left and is the same size – 2 part grid like structure.

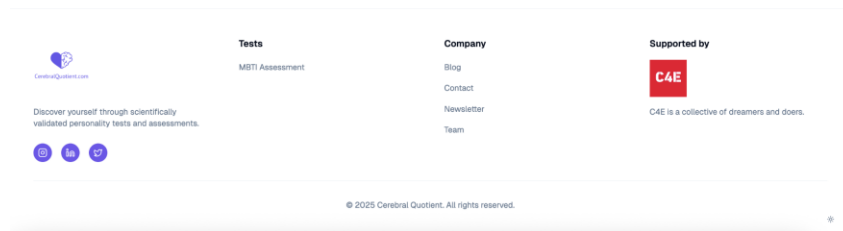

I want some delay in the QR Code generation. Make a progress bar which says: “Serving your custom, forever-QR Code in 3, 2,1” kind of thing.” And a success message after each creation. Otherwise, users cant tell if its new or old and we don't feel the magic of creation.”

After generation, the text should change from “Try it now” to “Your first QR is a free gift from us!” The small text should become “You can track every scan on this QR for richer insights!”

Then, the new QR block.

Then, two buttons: One to create a new QR code. Second to “Track scanning data”. Second one is more important for people to sign up and get report/data.

I want this kind of footer on all pages. This is from cerebralquotient.com.

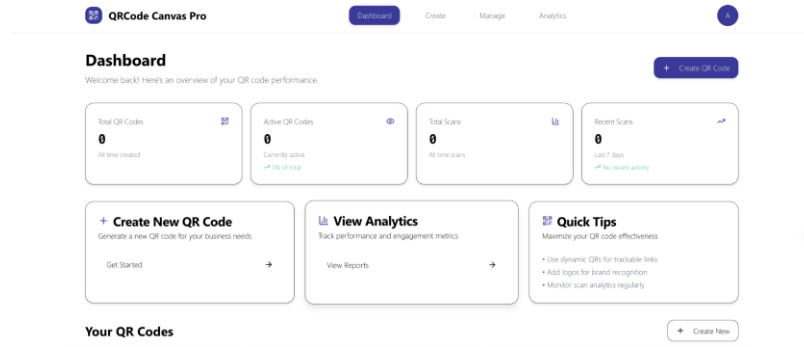

This is the logo file, first page:

https://www.canva.com/design/DAGAw2FOAQ0/SQM4OQJW4oxXE5nSX6-e0A/edit?utm_content=DAGAw2FOAQ0&utm_campaign=designshare&utm_medium=link2&utm_source=sharebutton

● No Credit Card Needed ● Join 5,000+ businesses ● Global Reach. Zero F

Start your free trial button should turn bigger with some shadow behind it when i hover on it.

On logging in, the first thing I want to see on top is:

Welcome back, Ashes!

Here's your QR performance overview.

Your last scan was in City and Time.

(Data and stats things here)

On dashboard overall:

- Add a search bar for quick QR code lookup by name or ID for users with many codes who need efficient navigation.
- Notification bell for alerts like high scan activity or expiring codes, for real-time updates
- Make tabs more contextual: For example, highlight "Dashboard" on load, and add tooltips for each tab to explain what they contain.
- Profile icon could expand to a dropdown with options like account settings, logout, or upgrade tier, tying into monetization
- Dynamic visuals on the stat cards: line chart, percent, arrows, etc etc.
- If there is no activity, replace zeros with motivational prompts: "0 Total Scans – Create your first QR to tell people about your business!"

- Merge "Create New QR Code" card with the bottom button, or make the card clickable to open the creation flow.
- Expand Quick Tips into an accordion or carousel for more advice, such as "Set up multi-URL for A/B testing" with a link to docs. This reinforces your special features like weighted destinations.
- Add filters/sorts: By type, scans, or date, helping marketers or event organizers from your user journeys.
- For empty state, include a sample QR preview or **tutorial video** embed to demonstrate value.
- Enable quick actions: Hover to preview the QR image or copy share link, **reducing steps to engagement.**
- Arrows/icons should have colors for emphasis
- No loading spinners or success messages visible; add these for actions like creating a code. Implement dark mode toggle in profile for accessibility.

On QR code overall:

Download Preview

- When i put a picture in the QR code, I want the option to be able to pick colors from the image displayed as QR code options. Makes for better looking QRs.

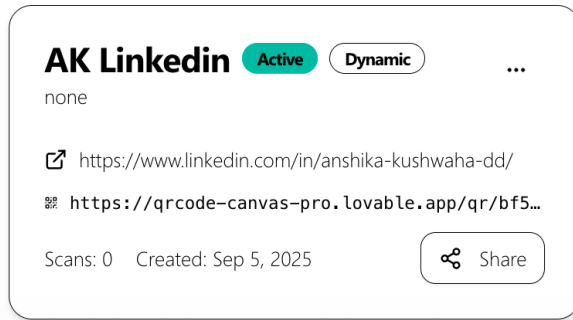

- When there's a picture, it should embed well. Right now it looks patchy.
- While creating, I don't see editing options for colors and logos. I can only access it via the gallery right now.. Let's change that.

More to add:

- **QR Customization (logos, colors, shapes, frames):** Users want branded codes; competitors often charge extra for this.
- **Multiple Download Formats (PNG, SVG, EPS):** High res exports prevent scanning issues, free tools limit to low-quality PNG.
-

Manage QR Codes

View and manage all your QR codes

These code cards should look like a gallery with tags.

I want to see the QR Code here.
Then name, tags and links. Scans,
created and share can be smaller.
Think of it like a gallery.

OR

Turn this into a table or grid view: Columns for QR name, type (static/dynamic), creation date, last scan, status (active/inactive), and actions (edit, download, delete). This scales for users with 10+ codes.
